

THE ADVANTAGES OF SINGAPORE MATH®

Improving math skills for children in grades 1 – 5 by:

- Developing their number sense
- Enhancing mental math skills
- Emphasizing critical and analytical thinking
- Increasing understanding using model-drawing (a visual approach to solving word problems)
- Building confidence and self-esteem

My daughter's performance has improved significantly. In addition to her math skills, she is more confident and likes to be challenged. We plan to stay with Ottimmo until she graduates.
- Shilpa C.

I recommend Ottimmo to parents who want their kids to shine in math. Ottimmo makes the learning experience truly enjoyable.
- Naveen B.

AVERAGE INCREASE IN COGNITIVE MATH SCORES

Ottimmo's philosophy is not only to improve test scores and classroom grades, but to provide children, grades 1 -5, with the tools to succeed in upper level math including pre-algebra, algebra, and geometry; therefore, we employ the Singapore Method. The Singapore Math Curriculum focuses on hands-on learning, pictorial representations, followed by an abstract phase. This three-step process encourages children to learn "why" instead of just focusing on the "how" of solving math problems which enhances their overall problem-solving skills that are effective in other subjects, as well.
